SEC Section 508 Evaluation Template

Date: 1/16/2015

Name of Product: Revenue Premier

Contact for more Information (name/phone/email): Danny Reeves, Revenue Administration Practice Line Lead / 1-888-826-1324 ext. 403 / DReeves@RSImail.com

VPAT™

Voluntary Product Accessibility Template®

Version 1.3

The purpose of the **Voluntary Product Accessibility Template**, or **VPAT™**, is to assist Federal contracting officials and other buyers in making preliminary assessments regarding the availability of commercial "Electronic and Information Technology" products and services with features that support accessibility. It is assumed and recommended that offerers will provide additional contact information to facilitate more detailed inquiries.

The first table of the Template provides a summary view of the Section 508 Standards. The subsequent tables provide more detailed views of each subsection. There are three columns in each table. Column one of the Summary Table describes the subsections of subparts B and C of the Standards. The second column describes the supporting features of the product or refers you to the corresponding detailed table, e.g., "equivalent facilitation." The third column contains any additional remarks and explanations regarding the product. In the subsequent tables, the first column contains the lettered paragraphs of the subsections. The second column describes the supporting features of the product with regard to that paragraph. The third column contains any additional remarks and explanations regarding the product.

Summary Table

VPAT™

Voluntary Product Accessibility Template®

Criteria	Supporting Features	Remarks and explanations
Section 1194.21 Software Applications and Operating Systems	**Supported.**	Please refer to Section 1194.21 below.
Section 1194.22 Web-based Internet Information and Applications	**Supported.**	Please refer to Section 1194.22 below.
Section 1194.23 Telecommunications Products	Not applicable to our Product Suite.	Revenue Premier is not considered a Telecommunications product.
Section 1194.24 Video and Multi-media Products	Not applicable to our Product Suite.	Revenue Premier is not considered a Video and Multi-media product.
Section 1194.25 Self-Contained, Closed Products	Not applicable to our Product Suite.	Revenue Premier is not considered a Self-Contained, Closed product.
Section 1194.26 Desktop and Portable Computers	Not applicable to our Product Suite.	Revenue Premier is not considered a Desktop or Portable Computer.
Section 1194.31 Functional Performance Criteria	**Supported.**	Please refer to Section 1194.31 below.
Section 1194.41 Information, Documentation and Support	**Supported.**	Please refer to Section 1194.41 below.

Section 1194.21 Software Applications and Operating Systems – Detail

Criteria	Supporting Features	Remarks and explanations
(a) When software is designed to run on a system that has a keyboard, product functions shall be executable from a keyboard where the function itself or the result of performing a function can be discerned textually.	**Supported.**	All system functions and features can be executed utilizing a keyboard. Each function, as well as the results garnered by running each function, can be discerned textually.
(b) Applications shall not disrupt or disable activated features of other products that are identified as accessibility features, where those features are developed and documented according to industry standards. Applications also shall not disrupt or disable activated features of any operating system that are identified as accessibility features where the application programming interface for those accessibility features has been documented by the manufacturer of the operating system and is available to the product developer.	**Supported.**	The application does not disrupt or disable any activated features of other products, including, but not limited to; the base operating system, web browsing application (e.g., Windows explorer, Chrome, Firefox), DBMS (Database management system) or other third-party applications.
(c) A well-defined on-screen indication of the current focus shall be provided that moves among interactive interface elements as the input focus changes. The focus shall be programmatically exposed so that Assistive Technology can track focus and focus changes.	**Supported.**	The product suite has been designed to provide focus for all interactive elements in such a way that Assistive Technology will be able to track and update the focus as the user interacts with the system.
(d) Sufficient information about a user interface element including the identity, operation and state of the element shall be available to Assistive Technology. When an image represents a program element, the information conveyed by the image must also be available in text.	**Supported.**	The product suite has the advantage of native controls and unique labels to make each element easily identifiable by Assistive Technology. Images and/or icons are not used to convey information unless also accompanied by textual content.

(e) When bitmap images are used to identify controls, status indicators, or other programmatic elements, the meaning assigned to those images shall be consistent throughout an application's performance.	**Supported.**	Images are only used as a graphical enhancement to textual identifiers or controls. Text identifiers, their related image, and the meaning assigned to them are constant throughout the application.
(f) Textual information shall be provided through operating system functions for displaying text. The minimum information that shall be made available is text content, text input caret location, and text attributes.	**Supported.**	All textual information is provided as either HTML code or ASCII text through the web browser and can be rendered by Assistive Technology. Text content, text input caret location, and text attributes are available for consumption by Assistive Technologies.
(g) Applications shall not override user selected contrast and color selections and other individual display attributes.	**Supported.**	The product suite does not override or impact user selected contrast, color or display attributes.
(h) When animation is displayed, the information shall be displayable in at least one non-animated presentation mode at the option of the user.	**Supported.**	The product suite uses animation as a visual indicator of page load status. This animation is accompanied by a textual status bar. The user is not allowed to modify this animation in any way.
(i) Color coding shall not be used as the only means of conveying information, indicating an action, prompting a response, or distinguishing a visual element.	**Supported.**	The product suite does use color coding to indicate status, severity of informational messages and error conditions. The color coding is used in conjunction with both textual content and status icons.
(j) When a product permits a user to adjust color and contrast settings, a variety of color selections capable of producing a range of contrast levels shall be provided.	**Supported.**	Color adjustments are permitted by the application and are only limited by the browser's ability to render the pallet range.
(k) Software shall not use flashing or blinking text, objects, or other elements having a flash or blink	**Supported.**	The product suite does not utilize flashing or blinking elements.

Criteria	Supporting Features	Remarks and explanations
frequency greater than 2 Hz and lower than 55 Hz.		
(l) When electronic forms are used, the form shall allow people using Assistive Technology to access the information, field elements, and functionality required for completion and submission of the form, including all directions and cues.	**Supported.**	All form controls have labels and in most cases are accompanied by textual content. Assistive Technology will work with all form content including submission.

Section 1194.22 Web-based Internet information and applications – Detail

Criteria	Supporting Features	Remarks and explanations
(a) A text equivalent for every non-text element shall be provided (e.g., via "alt", "longdesc", or in element content).	**Supported.**	Every non-text element has a text equivalent via element content or "longdesc".
(b) Equivalent alternatives for any multimedia presentation shall be synchronized with the presentation.	**Supported.**	The product suite does not utilize multimedia files.
(c) Web pages shall be designed so that all information conveyed with color is also available without color, for example from context or markup.	**Supported.**	Every screen is clearly labeled with title, function and focus. When color is used to enhance the visibility of important information an alternate textual indicator is also used.
(d) Documents shall be organized so they are readable without requiring an associated style sheet.	**Supported.**	Documents are viewable without requiring an associated style sheet.
(e) Redundant text links shall be provided for each active region of a server-side image map.	**Supported.**	Server side image maps are not utilized in the product suite.
(f) Client-side image maps shall be provided instead of server-side image maps except where the regions cannot be defined with an available geometric shape.	**Supported.**	Client side image maps are not utilized in the product suite.
(g) Row and column headers shall be identified for data tables.	**Supported.**	All grids employ row and column headers.

(h) Markup shall be used to associate data cells and header cells for data tables that have two or more logical levels of row or column headers.	**Supported.**	Table cells are associated with the appropriate column and row.
(i) Frames shall be titled with text that facilitates frame identification and navigation	**Supported.**	All frames utilized by the application are titled and uniquely identified for easy navigation.
(j) Pages shall be designed to avoid causing the screen to flicker with a frequency greater than 2 Hz and lower than 55 Hz.	**Supported.**	All pages are designed to reduce or eliminate flicker. No pages within the application fall within the 2-55hz range, reducing the risk of optically induced seizures.
(k) A text-only page, with equivalent information or functionality, shall be provided to make a web site comply with the provisions of this part, when compliance cannot be accomplished in any other way. The content of the text-only page shall be updated whenever the primary page changes.	**Supported.**	All information within the application has a textual-based component eliminating the need for a text only page.
(l) When pages utilize scripting languages to display content, or to create interface elements, the information provided by the script shall be identified with functional text that can be read by Assistive Technology.	**Supported.**	All scripts (e.g., JavaScript) are either directly accessible to Assistive Technologies (keyboard accessibility) or an alternative method of accessing equivalent functionality is provided (e.g., HTML link).
(m) When a web page requires that an applet, plug-in or other application be present on the client system to interpret page content, the page must provide a link to a plug-in or applet that complies with §1194.21(a) through (l).	**Supported.**	No plug-ins required. Users can select the compliant PDF reader of their choice.
(n) When electronic forms are designed to be completed on-line, the form shall allow people using Assistive Technology to access the information, field elements, and functionality required for	**Supported.**	All forms elements are labeled and in most cases have accompanying textual information that will allow Assistive Technology to aid in completing and submitting

completion and submission of the form, including all directions and cues.		each form.
(o) A method shall be provided that permits users to skip repetitive navigation links.	**Supported.**	Navigational links are provided on pages that require repetitive actions or navigation.
(p) When a timed response is required, the user shall be alerted and given sufficient time to indicate more time is required.	**Supported.**	There are no timed responses in the system; however, the system does log the user out automatically after a predetermined period of inactivity (configurable) in order to comply with application security requirements.

Section 1194.31 Functional Performance Criteria – Detail

Criteria	Supporting Features	Remarks and explanations
(a) At least one mode of operation and information retrieval that does not require user vision shall be provided, or support for Assistive Technology used by people who are blind or visually impaired shall be provided.	**Supported**	All information provided by the application includes text and or labels. Full support for screen readers and other Assistive Technology is provided.
(b) At least one mode of operation and information retrieval that does not require visual acuity greater than 20/70 shall be provided in audio and enlarged print output working together or independently, or support for Assistive Technology used by people who are visually impaired shall be provided.	**Supported**	All information provided by the application includes text and or labels. Full support for screen readers and other Assistive Technology is provided.
(c) At least one mode of operation and information retrieval that does not require user hearing shall be provided, or support for Assistive Technology used by people who are deaf or hard of hearing shall be provided	**Not Applicable**	No portions of the product suite require the users to be able to hear.

(d) Where audio information is important for the use of a product, at least one mode of operation and information retrieval shall be provided in an enhanced auditory fashion, or support for assistive hearing devices shall be provided.	**Not Applicable**	The application does not utilize or employ audio or audio-driven functions.
(e) At least one mode of operation and information retrieval that does not require user speech shall be provided, or support for Assistive Technology used by people with disabilities shall be provided.	**Not Applicable**	User speech is not required by the application.
(f) At least one mode of operation and information retrieval that does not require fine motor control or simultaneous actions and that is operable with limited reach and strength shall be provided.	**Supported**	The product suite can be run with keyboard navigation or Assistive Technology and does not require fine motor skills to control or perform simultaneous actions.

Section 1194.41 Information, Documentation and Support – Detail

Criteria	Supporting Features	Remarks and explanations
(a) Product support documentation provided to end-users shall be made available in alternate formats upon request, at no additional charge	**Supported**	Support documentation is available through the application in HTML, MS Word and PDF at no additional charge.
(b) End-users shall have access to a description of the accessibility and compatibility features of products in alternate formats or alternate methods upon request, at no additional charge.	**Supported**	A description of the accessibility and compatibility features will be provided upon request in MS Word or PDF format at no additional charge.
(c) Support services for products shall accommodate the communication needs of end-users with disabilities.	**Supported**	Revenue Solutions, Inc. provides technical support for all products through email, voice (telephone), fax and onsite technical assistance when applicable.
